

MediClick Inc.

MediClick Inc. (www.mediclick.com) offers software as a service (SaaS) solutions exclusively for the healthcare supply chain. The Raleigh, N.C.-based company currently serves more than 200 hospital organizations with its integrated suite of solutions: MediClick for the Supply Chain, MediClick for Contracts & Analysis and MediClick for Financials.

Dedicated to helping hospitals and integrated delivery networks (IDNs) take control of their supply chains, MediClick - unlike most enterprise resource planning (ERP) vendors - develops products only for the healthcare industry. Through the MediClick suite, materials managers, supply chain and financial executives can manage all supply chain activities; automate and control contracts and pricing; and manage their financials through general ledger and accounts payable.

MediClick is the first healthcare-industry vendor to deliver a materials management and financial system via the SaaS model - a modern approach to software. Under this model, applications are accessed via the Internet, which provides complete scalability, allows for frequent application enhancements and results in a lower cost of ownership as there is no equipment to buy or maintain. Rather than purchasing software and hardware and relying on internal IT departments for assistance, SaaS clients pay a monthly fee to access the MediClick suite of solutions.

In spring 2008, MediClick launched MediClick for Contracts & Analysis, an application that empowers hospitals to take control of their supply chains, helping them navigate the complicated pricing dynamics of group purchasing organizations (GPOs), manufacturers and distributors. Contracts & Analysis streamlines the contract management process providing analytical and statistical tools for supply chain and financial executives to make informed strategic decisions. When used in concert with MediClick for the Supply Chain, the application synchronizes item file prices with GPO and manufacturer contract pricing to help users eliminate off-contract spend, monitor compliance levels and secure the best available prices.

Led by industry veteran Mike Merwarth, MediClick is a privately owned company that employs approximately 55 people. The former healthcare division of Global Software, MediClick spun off in 2001 to focus exclusively on the unique needs of the healthcare industry. As president, Merwarth focuses on quality and innovation, characteristics that have helped MediClick consistently earn top rankings from MD Buyline, the most comprehensive service for rating healthcare products.

To offer clients the most complete solutions possible, MediClick works with premiere partners to deliver integrated service and innovative technology. Partner organizations include ADP (Automatic Data Processing Inc.), BNA Software, Cardinal Health Inc., Global Healthcare Exchange (GHX), Microsoft Corporation, and SAVVIS Inc.
